

JJumboFX — raw X archive

Public posts, his replies, collected third-party replies, and downloaded chart images from the 2 Sep 2026 research pass. No text copied from the two attached manuals. This is not a complete scrape of the account — only items retrieved while reconstructing the model.

66 posts catalogued. Images live next to the post they belong to. Videos were not rasterized; they are noted.

Account: JJumbo @JJumboFX · <https://x.com/JJumboFX>

How to read this file

Newest first. Each block is one post: timestamp, numeric id, permalink, raw text, images, then replies that were pulled with the thread. Third-party replies are labelled with handle. His own follow-ups that were separate posts appear as their own blocks.

If you need a post that is not here, it was not in the retrieved set. The companion findings PDF only uses rules that can be pointed at a block in this file (or a public TradingView paragraph).

People catching up on pre market range mean reversions on #NQ_F

Range size matters

Balanced - imbalanced overnight matters

Almost any time window between 5am and 9am will behave similarly, that's not a wheel rediscovery

Small ranges with high double break % > skewed data, most of it isn't applicable as edge

~45% of pre market ranges do Infact single break during AM

Don't be surprised if your breakout isn't failing

Wed 26 Aug 2026 18:37 GMT · id 2092682983496991146

Range break classification filtered by range size

statistics of the range giving the structure to look for in the AM session.

1.2% range size very low chance of double break

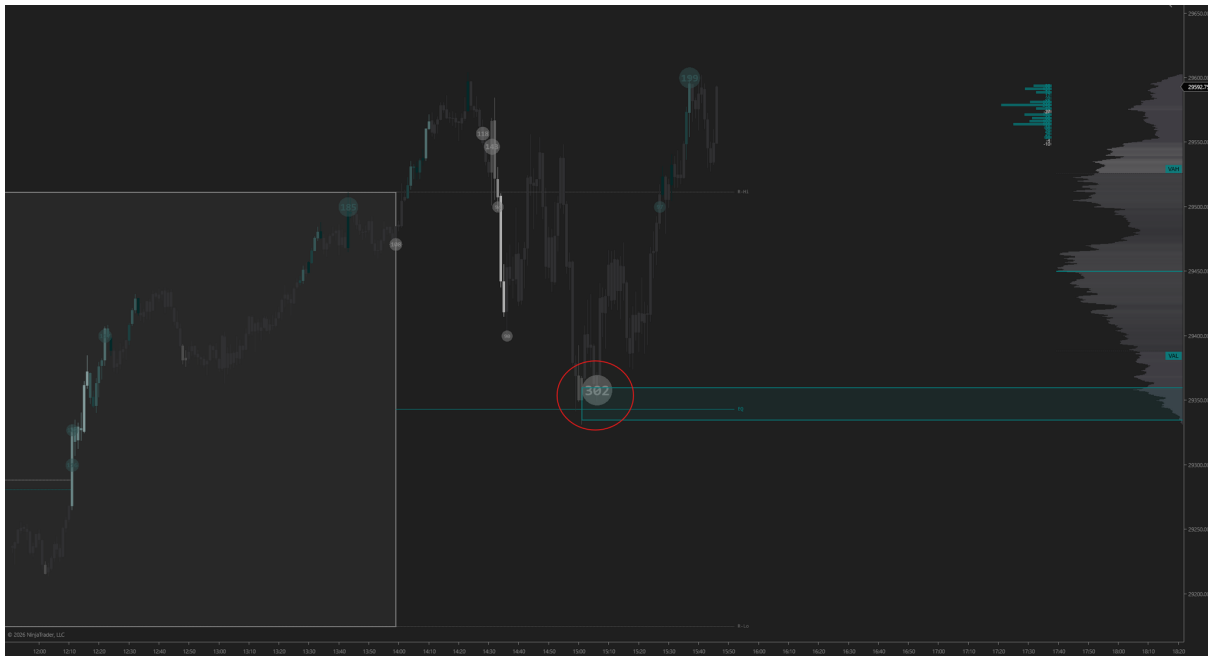

combined single break % (high-low) > 74% of only breaking the high/low across all days analysed

Retrace to midpoint stays at 60.4%

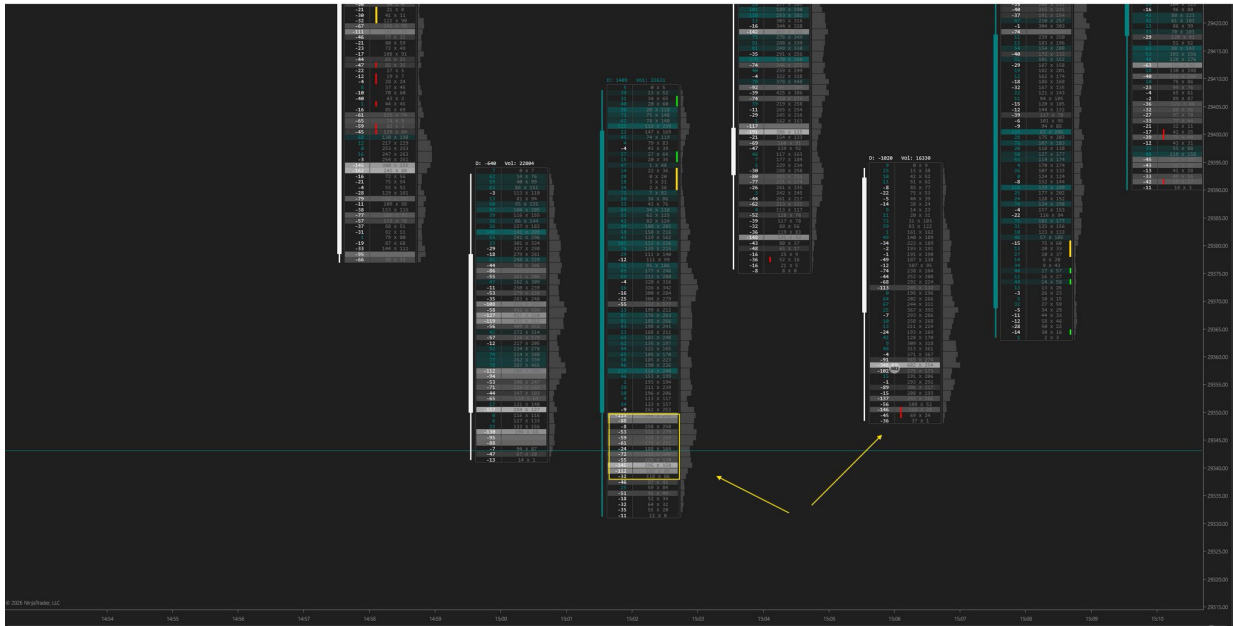

on the VP and OF side

easy spot absorption at midpoint of the range and taper at lows

footprint only highlighting top 35% of transactions

HKTSdRFWgAAeTCp.png

HKTSev_XMAAyW86.jpg

Core Sequences - Break Classification

Over all trading days: how often does price break one side, both sides, or stay inside the 6-9 range during 9-12

Range Size	Days	Double Break	Single Break HIGH	Single Break LOW	No Break
0-0.3%	1034	55.5%	23.7%	20.3%	0.5%
0.3-0.5%	1053	48.1%	25.6%	25.7%	0.5%
0.5-0.8%	705	34.8%	34.9%	29.5%	0.9%
0.8-1.2%	288	34.0%	31.2%	33.0%	1.7%
1.2%+	169	17.8%	35.5%	38.5%	8.3%
ALL	3249	44.8%	28.0%	26.1%	1.1%

Updates on the Absorption zone+ (some requested features as well) and PD RTH Range+ coming some time next week, took me a little longer than anticipated.

Absorption Zone+

1. Absorption candles color coding bullish/bearish (new)
2. Absorption Isolation (new)
3. Absorption imbalances (new)
4. Custom multi time-frame imbalances selection (new)

PD RTH Range+

1. Dynamic Premium & Discount box (new)
2. Fixed/Custom Projections (new)
3. RTH statistics boxes (removed)

Touching grass in Spain for the week

Seen the opportunity and took it on all topsteps

@JJumboFX

Good ole hitrate percentage

@JJumboFX

It's the minimum average range if the 9-12 session

@JJumboFX

It was about 2 trades, one mini each

Used the imbalance in the absorption candle

New update of that indicator coming soon

London H4 stats

Absorption zone at the reversal

mis-clicked taking profits and closed fully lol final target was 208/225

+78 points

Bt @bt2057

Do you use time models in order to trade London or you mainly guide on your new stat session? Gracias.

El chapo888 @SketcherWesley
Did you use the inverse fvg to enter?

Been running statistics from 15 years NQ data

i input my model criteria and the results are quite interesting.

average time of reversal in the 9- 12 time window over 15 years, the highest count appears to be between 9:40 9:50 just like i have backtested.

the coordinates are based on the 06:00 - 09:00 range and its levels

An astonishing 86.46% of reversal of off the -0.5 stdv (exhaustion)

this was the Tuesday trade for example.

does this mean i have a 100% win rate? no

but being a reversal trader for the most part, and having data-backed levels definitely help my trading.

Austin Clark @AC_Trades

Now add fuel to the fire and instead of finding the average find the median. Your average can be greatly skewed by outliers. Great work

Dev Malik @Devmalik1806

The 9:30-10:30 Rth candle The High/low of candle is formed in first 15 min So yeah stats are right

gcnst91 @gcnst91

started to look into this thing. I adjusted some things regarding entries, man this looks very promising for real. u entry based on 3m inv? i was looking to 30s/1m inv or 30s/1m cisd after +-0.5 sweep, targeting high/low of 6-9 range (kinda 20-30p scalps)

#NQ

beautiful delivery on AM

- 9:40 judas into the exhaustion range level
- RTH highs as draw in liquidity
- 1.33 1.66 end of day max expansion
